Project Experience

#1

Project Name	MobileRevolution ERP	Project Type	Web
Project Category	ERP		
Duration	5 months	Team Size	1
Description	<p>erp.mobilerevolution.ch website is related erp management. This website provides dashboard for branches of mobilerevolution, so branches can order products from main branch of mobilerevolution.</p> <p>Project Description:</p> <p>There is branch wise login for erp dashboard. Admin who logged in using main branch then he can manage branch, branch employee, customer, orders information. Also admin can see all branch order records through graph i.e. day wise, month wise, year wise.</p> <p>Logic Used:</p> <p>I have developed dashboard panel for admin to manage orders, products, branch info. Kept date wise record of orders submitted by branches to show graph on dashboard. Also used shopify(https://www.supplyrevolution.ch) api to update product inventory from erp to shopify and if any order made from shopify then save record in erp database and update products info to make centralized database system. Same logic is used for another platform siroop.ch which is also provides rest api to manage orders, product info from erp to siroop. Also added functionality to approve or disapprove orders by main branch based on availability. Also send email to branch whose order is approved or disapprove. Also added cron script functionality to send pdf of monthly marketing, franchising fees, orders related data to branch start of every month through mail.</p>
